A RUSSIAN TRAGEDY.

A St. Petersburg telegram says: A touch ing story is told by the Novoe Vremya of an event that happened some days ago in one of the principal hotels of that city. A been staying for a few days by himself in the hotel, one day, ordered dinner to be served for two, and then went to the railway station evidently to meet his expected friend. He returned to the hotel alone, and at dinner time, as his door was fast shut and no reply could be got from within, the police were sent to break open the door. They found the young man stretched across the table, shot through the heart. On the table and the fragments of a letter were found A man too busy to take care of his health about the floor. Another letter was found is like a mechanic too busy to take care of addressed to the proprietor of the hotel, stating that the young man had shot himself in despair because the young lady whom he had been expecting had not kept her promise. Half an hour afterward the postman brought a letter from the young lady herself, stating that she had missed the train, and would be unable to come till the next day. WHAT IS IT REMOVES THE DIRT! You may ask washerwomen and housekeepers, and your answer from nine out of ten will be, "Plenty of elbow grease," or, in other words, laborious rubbing upon the wash-board. And such is the case; for you first rub soap upon the cloth, and then you have to rub it in to make the dirt soluble; but does that remove it? No; to do that you must first dip it into the water and rub repeatedly to force water through the fabric, again and again. That is what removes dirt after having been softened by the chamical action of the ue way in which this could be most econom ally accomplished has been developed in the Fam-ly Washer and Bleacher, which embodies all the

THE PRINCIPLE OF THE WASHER AND BLEACHER

embodies all the essential points. Pirst, we have the desired heat which expands the fabric and the desired heat which expands the fabric and courses it to disc targe the dirt. Second, we obtain a powerful suction beneath the clothes, which produces a rapid downward current or water force, through and through them, thereby removing the dirt. Third, we use a large pody of water, which holds the dirt in solution. Fourth, we use but a small quantity of scap. Fifth, the washing is done by water, and not by steam.

HE PHILOSOPHY OF THE WASHER AND BLEACHER IS THIS,

We have 5 lbs. of metal, which attains a much We have 5 lbs. of metal, which attains a many greater degree of heat than the water surrounding it, consequently the water underneath the Washer becomes hotter and more expansive than in any other part of the boiler, and is thereby thrown to the surface through the tube at the rate of six to eight gallons peo minute, thus tending to produce a vacuum underneath the Washer at the bottom of the boiler, into which the water is rapidly drawn.

THE IMPROVED WASHER has a perfect fitting pipe, and is a combination metals which does not become sticky or dirty.

THE CAPACITY OF THE WASHER AND There are two sizes—No. 1, the Family size; No. 2, suitable for small hotels, restaurants, and barber-shops, boarding-houses, etc.

The Washer is corressed of metal and cannot get out of order.

It will work in any fist bottom boiler. It takes only three or four ounces of soap in ten or twelve gallons of water, and will wash bed or table lines, a boilerful in ten or fifteen minutes, wearing ap-parel in from ten to thirty minutes. Use no chem-loals—only good soap and soft water,
